# Ransomware

Get back up and *running*

## Ransomware is Constantly Evolving. Here's What You Should Know.

- Hackers are using freely available open source software and SaaS
- Organizations that rely on traditional backup are paying the ransom and still losing data
- Attacks come from countries without extradition treaties
- Hackers have upped the ante, threatening to publish or sell the data

## Ransomware by the Numbers

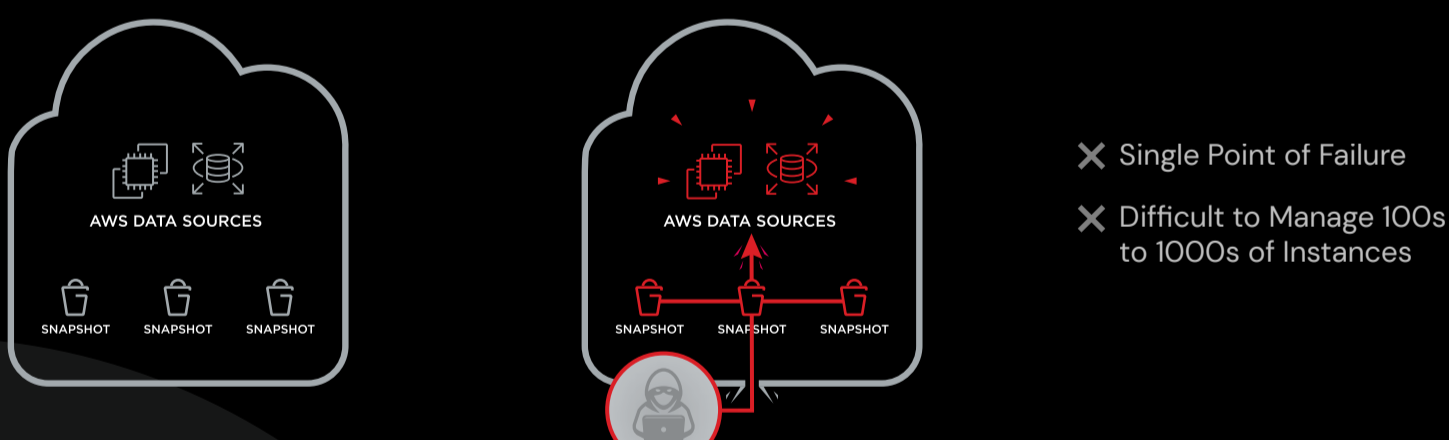

## The Hard Reality of Data Loss

## Recovery from Ransomware and Data Loss

You need a solid backup strategy to successfully recover from a ransomware attack. With an air-gap protected copy of your data provided by Clumio, you can get back up and running quickly.

### Typical Backup Approach

### Clumio Enterprise Backup As a Service
